To the scientific community at Rockefeller:

The University Scientific Resource Centers provide the Rockefeller scientific community with access to essential high-end instrumentation, technologies, and services. The Scientific Resource Centers also provide advanced training and support from the highly skilled Center scientists who bring intellectual and technical expertise and experience typically not available in individual laboratories. It is important for the morale, career progression, and retention of the Scientific Resource Center staff that their critical contributions are acknowledged in our publications. Documentation of the contributions of the Scientific Resource Centers to the University's science in publications also strengthens the Centers' position when they seek additional funding for instrumentation and operations. The type of recognition that is most appropriate can range from an acknowledgment to co-authorship, depending upon the contribution provided.

As a reminder, the University is obligated to ensure that funding sources for certain Scientific Resource Center equipment are properly acknowledged and a growing number of journals now require authors to identify whether core facilities were used in the generation of the reported data and findings. To facilitate reference to the Centers, the University has established Research Resource Identification numbers (RRID) for the Centers; these are available from Resource Center staff and websites.

We strongly recommend that you consult with Scientific Resource Center staff as early as possible in the planning stage for experiments that rely upon use of the Center, and that you seek review and feedback from Center staff on methods sections that reflect work done at/data generated by that Center.

Please refer to the University policy on Acknowledgment and Authorship for Scientific Resource Centers and Staff Members (copy attached; available [online](#)) for more specific guidance and encourage your research staff to do the same.

Rick Lifton  
President
